Malignant pleural mesothelioma is a rare but aggressive cancer that arises from the mesothelial cells of the pleura, the lining of the lungs. It is most commonly caused by exposure to asbestos, and it is often diagnosed at an advanced stage, when the prognosis is poor.

This issue of Thoracic Surgery Clinics provides a comprehensive overview of the latest advances in the diagnosis and management of malignant pleural mesothelioma. The articles cover a wide range of topics, including:

- Epidemiology of Malignant Pleural Mesothelioma

- Malignant Pleural Mesothelioma: Pathology and Molecular Genetics
- Diagnosis of Malignant Pleural Mesothelioma: A Multidisciplinary Approach
- Malignant Pleural Mesothelioma: Surgical Management
- Malignant Pleural Mesothelioma: Medical Management
- Malignant Pleural Mesothelioma: Role of Radiation Therapy
- Palliative Management of Malignant Pleural Mesothelioma
- Future Directions in the Management of Malignant Pleural Mesothelioma

This issue is an essential resource for thoracic surgeons, oncologists, pulmonologists, and other healthcare professionals who care for patients with malignant pleural mesothelioma.

## **Table of Contents**

1. Epidemiology of Malignant Pleural Mesothelioma
2. Malignant Pleural Mesothelioma: Pathology and Molecular Genetics
3. Diagnosis of Malignant Pleural Mesothelioma: A Multidisciplinary Approach
4. Malignant Pleural Mesothelioma: Surgical Management
5. Malignant Pleural Mesothelioma: Medical Management
6. Malignant Pleural Mesothelioma: Role of Radiation Therapy
7. Palliative Management of Malignant Pleural Mesothelioma

## 8. Future Directions in the Management of Malignant Pleural Mesothelioma
