

Neurology For Nurses: An Essential Guide to Neurological Care

Neurology is a branch of medicine that deals with the anatomy, physiology, and diseases of the nervous system. The nervous system is a complex network of nerves and nerve cells that transmit signals throughout the body. It is responsible for voluntary and involuntary movements, sensations, thoughts, emotions, and memory.

Nurses play a vital role in the care of neurological patients. They provide direct patient care, monitor patients' conditions, and administer medications. Nurses also educate patients and families about neurological conditions and their treatment.
